

City South Retail Park - Leeds

Project:
City South
Location:
Leeds
Client:
BBC Pension Fund
Consulting Engineer:
Alan Wood & Partners
Architect:
Barton Willmore
Project Value:
£2.5 million

Description:

Alan Wood & Partners were appointed to survey the existing multispans portal structure, design foundations, superstructure and drainage.

The Client required that the units at City South Retail Park had a facelift to the front elevations and that existing large units be sub-divided into smaller units to increase the letting potential.

The existing front elevations were remodeled to allow additional doors, glazing and feature entrance canopies.

This required a full assessment of the stability of the existing structure to enable the repositioning of bracing panels.

The foul drainage system was redesigned to allow for additional amenity blocks to the sub-divided units and the surface water system being modified for the drainage from the feature canopies.

ature entrance canopies.
